AllOne Mobile to Provide Access to Microsoft HealthVault Using Mobile Phones

Mobile Tool Helps Consumers Manage Personal Health Records, Improve Medical Outcomes

WILKES-BARRE, Pa. – Sept. 22, 2008 – AllOne HealthSM today announced it will connect Microsoft® HealthVaultTM with AllOne MobileSM, a secure mobile phone application that allows individuals to access important personal health information using their mobile phones. Provided by AllOne Health and secured by Diversinet Corp., AllOne Mobile is an application that uses mobile phones to integrate data that users collect from a broad network of sources and save in their HealthVault accounts.

“AllOne Mobile ties together our fragmented health system’s information exchange capabilities and promotes the health and well-being of individuals and employers for whom they work,” said William C. Reed, president and CEO of AllOne Health. “Soon, individuals will be able to securely access, record and analyze real-time data about their health using a device millions of people use every day – a mobile phone.”

“Better access to health information means more informed medical decisions and potentially improved health outcomes,” said Jim Mault, M.D., director of business development for Microsoft Health Solutions Group. “AllOne Mobile will make it convenient for consumers to access personal health information by linking all our HealthVault programs directly to a device that millions carry with them every day. This will extend the reach of HealthVault and its power to transform health care decision-making.”

AllOne Mobile provides safe, consumer friendly, 24/7 access to personal health information without the need for an Internet connection. Using industry standards such as the Continuity of Care Record (CCR) and Health Level Seven, AllOne Mobile’s link to HealthVault enables subscribers to share health information about themselves and family members with physicians, hospitals, urgent and emergency care facilities, and other trusted third parties.

The application’s robust security is made available through a partnership with Diversinet Corp. (TSX Venture: DIV, OTCBB: DVNTF), a leading provider of secure application platforms for the mobile world. This high level of security and control gives users the confidence and comfort to create, manage and enhance their health information quickly and easily, simply by pushing a few buttons on their mobile phones.

AllOne MobileSM with Microsoft HealthVault / P2

Information transfer between HealthVault and AllOne Mobile extends mobile health information services to a broader base of third parties connected with HealthVault. Coupled with AllOne Health's other programs and services to help keep employees, health plan members and their families healthy and safe, this holistic approach to health empowers the individual and can help improve medical outcomes.

About AllOne MobileSM

AllOne Mobile is an industry-leading, secure mobile application developed by AllOne Health to place personal health information at consumers' fingertips through their mobile phones. AllOne Mobile saves health information in a secure environment and links to users' mobile phones, giving them well-organized, easy-to-use, 24/7 mobile access – without the need for an Internet connection. In conjunction with its technology partner, Diversinet, AllOne Mobile enables health plans and large employers to provide real-time access to health information that can be securely shared with physicians, hospitals, pharmacies and other health care providers. For more details, visit www.allonemobile.com or call (888) 989-9001.

About the AllOne HealthSM

AllOne Health encourages individuals to take responsibility for their health and provides tools and services to employers and health plans to help support them.
